STRUCTURAL RELATIONSHIP MODEL OF CAUSES AND EFFECTS OF CONSTRUCTION CHANGES IN UAE CONSTRUCTION INDUSTRY

UNIVERSITI TUN HUSSEIN ONN MALAYSIA

UNIVERSITI TUN HUSSEIN ONN MALAYSIA

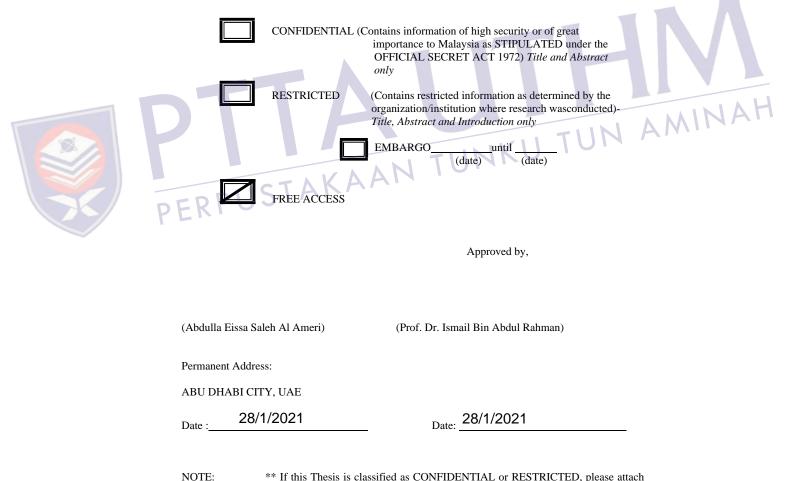

STATUS CONFIRMATION FOR THESIS DOCTOR OF PHILOSOPHY

STRUCTURAL RELATIONSHIP MODEL OF CAUSES AND EFFECTS OF CONSTRUCTION CHANGES IN UAE CONSTRUCTION INDUSTRY

ACADEMIC SESSION: 2020/2021

I, **ABDULLA EISSA SALEH AL AMERI**, agree to allow Thesis to be kept at the Library under the following terms:

- 1. This Thesis is the property of the Universiti Tun Hussein Onn Malaysia.
- 2. The library has the right to make copies for educational purposes only.
- 3. The library is allowed to make copies of this Thesis for educational exchange between higher educational institutions.
- 4. The library is allowed to make available full text access of the digital copy via the internet by Universiti Tun Hussein Onn Malaysia in downloadable format provided that the Thesis is not subject to an embargo. Should an embargo be in place, the digital copy will only be made available as set out above once the embargo has expired.
- 5. ** Please Mark (V)

** If this Thesis is classified as CONFIDENTIAL or RESTRICTED, please attach the letter from the relevant authority/organization stating reasons and duration for such classification. This thesis has been examined on date November 1st, 2020 and is sufficient in fulfilling the scope and quality for the purpose of awarding the Degree of Doctor of Philosophy in Technology Management

TUN AMINA

Chairperson:

ASSOC. PROF. DR. NOR HAZANA BINTI ABDULLAH Faculty of Technology Management and Business Universiti Tun Hussein Onn Malaysia

STRUCTURAL RELATIONSHIP MODEL OF CAUSES AND EFFECTS OF CONSTRUCTION CHANGES IN UAE CONSTRUCTION INDUSTRY

ABDULLA EISSA SALEH AL AMERI

Faculty of Technology Management and Business Universiti Tun Hussein Onn Malaysia

FEBRUARY 2021

I hereby declare that the work in this thesis is my own except for quotations and summaries which have been duly acknowledged.

Student	:
Date	Abdulla Eissa Saleh Al Ameri : <u>28/1/2021</u>
Supervisor Date Co-Supervisor	: Prof. Dr. Ismail Bin Abdul Rahman 28/1/2021
Date	: 28/1/2021

DEDICATION

I dedicate this thesis to my dear and beloved parents for their uncommon support, perseverance, encouragement and prayers, despite the hard times they went through, which gave me the strength to withstand the obstacles I went through during my academic journey.

ACKNOWLEDGEMENT

I am grateful to Allah Almighty for giving me the health, patience, and perseverance to complete this thesis. It was the most challenging period of my life, but you were always with me. My Ph.D. journey, with its sweet and bitter moments, would not have been complete without the support of Prof. Dr. Ismail Abdul Rahman, whose exemplary supervision and academic guidance makes me feel deeply indebted. Indeed, you are there every step of the way to this moment. His exceptional knowledge, experiences, insightful feedback, and constructive critiques substantially guided me through this process to overcome my Ph.D. challenges. I cannot imagine having a better supervisory team. It has been a true pleasure for me to know you and have the opportunity to work with you over the past four years. I owe this accomplishment to my family; you let me go and endured the pain of being left behind, and a pain I can hardly bear to be apart. The mother of my children, you sacrificed your effort by taking the extra mile on my behalf. Thank you very much. To my mother and father, the seed you planted with your green hand has germinated. May you live long to enjoy its fruit. I would like to extend my appreciation to my friends and fellow Ph.D. candidates at the University who made this journey joyful and pleasant. I will always remember in my heart the beautiful moments that we shared together. They have always been available to help with my academic and personal matters.

ABSTRACT

Studies have shown that changes happened in late construction project phases contributed in major failure of a project. Hence, this study is intended to develop structural relationship model of causes and effects for construction changes from the perspective of the UAE construction practitioners. This study was carried out using a quantitative approach with the respondents coming from managerial level working that are working on mega construction projects. The questionnaire was validated using pilot study by 28 construction experts with the outcome that shown that all the 58 causes were categorised into 3 groups (client, contractor, and consultant) and 48 effects were categorised into 3 groups (time overrun, cost overrun, and quality assurance). Next, the actual survey came with 100 valid responses and the data collected from the survey were analysed descriptively. The results found that the most influential construction change causes affecting a project's performance is the lack of coordination, while the most challenging construction changes effects were the delay in completion. The collected data were further tested by using PLS-SEM relationship model and found that the model has achieved all the assessment criteria with goodness-of-fit index of 0.404 which validated the model. It also found that the relationship of construction changes triggered by contractor has significant effect on time, cost and quality of the project. To ensure that the model is applicable to the UAE construction industry, face validation by selected construction experts was conducted and found that all experts agreed on the model. Hence, this study has shown the importance of identifying construction change causes and effects that it could be useful being practiced by the UAE construction industry.

ABSTRAK

Salah satu risiko yang cukup besar dalam industri pembinaan adalah perubahan yang melampaui muncul dalam semua projek pembinaan. Kajian terkini menegaskan bahawa perubahan berlaku dalam fasa projek pembinaan yang lewat menyumbang kepada kegagalan keseluruhan projek. Oleh itu, kajian ini bertujuan untuk membangunkan model hubungan struktur sebab dan akibat faktor perubahan pembinaan dari perspektif pengamal pembinaan UAE. Kajian ini dijalankan berdasarkan pendekatan kuantitatif dengan peringkat pengurusan yang mengendalikan projek pembinaan besar. Soal selidik telah disahkan menggunakan kajian rintis daripada 28 pakar pembinaan dengan hasilnya menunjukkan bahawa semua 58 punca menyebabkan perubahan yang dikategorikan kepada 3 kumpulan (klien, kontraktor, dan perunding) dan 48 kesan yang juga dikategorikan kepada 3 kumpulan (melebihi masa dan kos dan juga jaminan kualiti) dianggap relevan. Seterusnya, tinjauan sebenar telah menghasilkan 100 tidak balas yang sah. Data yang dikumpul dari kaji selidik dianalisis secara deskriptif. Keputusan mendapati penyebab perubahan yang paling ketara mempengaruhi prestasi projek pembinaan adalah kurangnya koordinasi dari kumpulan pelanggan. Manakala kesan dari perubahan pembinaan yang paling mencabar adalah kelewatan dalam jadual penyiapan dari kumpulan melebihi masa. Keputusan dari analisis kaji selidik selanjutnya digunakan untuk membangunkan model perhubungan PLS-SEM. Model yang dibangunkan telah mencapai semua keperluan kriteria penilaian model dengan indeks kebaikan yang sesuai ialah 0.404 yang menunjukkan kuasa pengesahan besar. Ia juga mendapati bahawa hubungan perubahan pembinaan yang dicetuskan oleh kontraktor mempunyai pengaruh yang signifikan terhadap masa, kos dan kualiti projek. Bagi memastikan model tersebut terpakai kepada industri pembinaan UAE, pengesahan oleh pakar pembinaan terpilih telah dijalankan dan mendapati bahawa semua pakar bersetuju dengan hasil model. Oleh itu, kajian itu telah menunjukkan pentingnya dalam mengenal pasti sebab-sebab perubahan pembinaan dan hubungannya terhadap kesan dari perubahan tersebut yang dapat digunakan di kalangan pengamal pembinaan di UAE.

CHAPTER 1

INTRODUCTION

1.1 Introduction

This study was intended to uncover the relationship between the causes and effects of construction changes of UAE construction industry. There are many studies on identification of the causes and effects of construction changes around the world but not many for UAE scenarios. Furthermore, this study not only identified the causes and effects but also develops a relationship between them. This chapter provides the overview of the research study.

1.2 Background Of Study

The construction industry has expanded considerably and developed as one of the leading industrial sectors for bringing progress and improvement to the society and economy of a country. Also, it is considered as one of the leading sectors for job generation and thus, its development is one of the criteria used for assessing the evolution stage of countries, and its sustainable development is important for the society and its possible development of urbanization (Dainty *et al.*, 2006). Since the construction industry is an ever-growing, dynamic, complex and expandable compared to other industries (Jean, 1998; Anna & Lars-Erik, 2002), a number of interrelated risks and challenges has risen and issues such as poor or insufficient job performance, accidents, poor communication, cost and time overruns, and many other issues are being discussed internationally (Abd El-Razek *et al.*, 2008; Rahman *et al.*, 2013).

Essentially, in construction projects, changes happen due to the limited resources for project's scheduling and planning such as time, cash and manpower. The official method of implementing changes in project is by the "Change order" which allows the contractor to perform defined changes in project throughout its life cycle. These changes are regularly the origin of project disputes and arguments.

Several studies have conducted an investigation on the causes and effects of construction's project delays since those affects the overall project's performance, productivity and reputation (Owolabi *et al.*, 2014). Larsen *et al.* (2015) stated that project schedule, budget, and quality level are usually affected and the most significant factor for time is troubled or lack of project funding; for cost, mistakes or blunders in consultant material; and for quality, faults or exclusions in construction work.

1.3 Problem Statement

Failure of a construction project can be associated with unsuitable environment that often leads to possible disruptions during a project life cycle (Fewings & Henjewele, 2019). One of the main disruptions is when construction changes occur during crucial timing by factors such as scope of work changes and design errors which can affect the project. Changes impact the project significantly by cost overruns, schedule delays, profit shortfalls and reducing or disrupting the labour productivity. Ahmed & Arocho (2020) found that an increase around 10% of the total project cost of construction projects. Changes are also one of the significant sources of disputes in construction industry which increases the possibility of contractual disputes (Walch et al., 2015). Durdyev & Ismail (2017) classified the construction change causes into two categories of design-related and human-related.

There are also many studies on the issues of construction change in construction industry and majority of these studies are qualitative in nature and there is a lack of quantitative research. For instance, Al-Dubaisi (2000), Akinsiku *et al.* (2014) and Almarri & Abu-Hijleh (2017) which offered qualitative studies on change causes and effects among construction projects in various countries worldwide. Other recent study conducted by Abusafiya & Suliman (2017) discussed only one effect of change (Cost Overrun) in Bahrain construction projects, followed by Sohu *et al.* (2018) that only identified causes of the cost overrun as a construction change effect in

Pakistan construction projects. The UAE construction industry is one of the leading sectors which drives its economy and largest sectors in UAE for job creation that engages more than 2 million people which represents about 7.2% of the total workforce (Enshassi *et al.*, 2016; Daleure, 2017). It boots UAE economy to a higher level and still playing a pivotal role in the development, urbanization and industrialization of the UAE (Ahmed, 2017). It is considered as a significant contributor to the GDP increase in the last 50 years (Muhammad, 2017; Abdullahi & Bala, 2018). As a result, it has contributed to the transformation of the UAE into a more innovative status as planned in the 2025 vision (Muhammad, 2017).

A study by Ren *et al.* (2008) found that most of the UAE mega construction projects needed various requirements which are interrelated and formed critical parts of the project. Issues likes supply and demand where the problems of over promising the stakeholders with more than the possible existing resources allowed. Conseuqently, many of these promises couldn't be delivered on time due to the finite resources. Additionally, with the mix of multicultural people working in construction project could lead to miscommunication and substandard quality of the construction. These issues will inevitably bring changes in the project implementation. These changes that are not accounted could lead to more major issues such as such as arbitration, lawsuits and major costs increase over time which affects the success rate of a project.

P be However, this study is intended to relate to the three categories of construction change causes with three categories of construction change effects for mega project in the UAE construction industry. In this study, the relationship that integrates the construction change causes and effects revealed through literature review and put through a questionnaire survey will help to establish a common model of causes and effects of construction change to help better the industry. Hence, this study proposes not only to recognize and assess the cause and effect factors but also to set up the relationships between those factors using advanced multivariate analysis. With this study, it will be able to provide a key component of any construction organization to move towards achieving the best practice amongst construction project through recognising possible cause and effect factors of changes so that it can minimize the risk of project failure and thus improve the overall project performance.

1.4 Research Questions

From the problem statement, the researcher's main questions are as follows:

- (i) What are the cause and effect of construction change factors in construction projects?
- (ii) What are the most significant cause and effect of construction change factors?
- (iii) What is the structural relationship between cause and effect factors of the construction changes?
- (iv) How do this relationship is validated?

1.5 Research Aim And Objectives

The main aim of this study is to establish a structural relationships model between cause and effect factors of construction changes in construction projects. To achieve this aim, a number of objectives need to be met:

- (i) To identify the cause and effect of construction change factors in the construction projects.
- (ii) To determine most significant cause and effect of construction change factors.
- (iii) To develop a structural relationship model between cause and effect factors of construction changes.
- (iv) To validate the structural relationship model with the experts on the model outcomes.

1.6 Scope Of The Study

This study adopted a quantitative approach where the data was collected through questionnaire survey and analysed using statistical tool. Consequently, the targeted groups of respondents are managers who are experienced in handling construction projects in UAE. Finally, the tool that is to be applied in developing structural equation model is the Smart PLS-SEM software.

1.7 Significance Of The Study

This study attempted to establish the relationship between the cause and effect of construction change factors to the project performance. The significance of this study is as follows: To the academia, the finding from the research will contribute to the growing body of knowledge for the study area of construction project management. They can adapt and use any important information for further investigation in related research areas. While for the practitioners, the developed model will provide information for the construction experts regarding the relationship between significant cause and effect of construction changes. This is vital as construction professionals will effectively avoid possible change causes and on the same time investigate the possible negative effects to proactively respond to them. Knowledge of these causes and effects will help in developing successful construction projects.

1.8 Research Methodology

The methodology adopted for this research was based on two methods which include literature reviews and questionnaire survey. First, by reviewing the literature related to cause and effect factors of construction changes to interpret and determine the current knowledge of research focus in order to accomplish the stipulated research objectives. The literature sources comprise of thesis, dissertation, journal articles and conference paper. Two questionnaires were designed one for pilot and one for actual survey. A pilot survey was tested amongst construction professional prior to collecting the actual data from the targeted respondents. The collected data was analysed using statistical tools to draw conclusions and suggestions for researchers and construction's practitioner.

APPENDIX A

	Lists of change causes
References	Causes of construction change [total 57 factors from 11 references]
	 Clients financial problems Economic inflation
	,
1) A coef of al. (2005)	
1) Assaf <i>et al.</i> (2005)	 4) Inexperienced subcontractors 5) Deep estimations of east and quantity.
	5) Poor estimations of cost and quantity (c) Uich reners of succhard costs (a.g. office rents, contract costs, etc.)
	6) High range of overhead costs (e.g. office rents, contract costs, etc.)
	7) Lack of contractor's administrative personnel8) Owners' needs
2) Megha & Rajiv	9) Poor site management team 10) Poor investigation of project location
(2013)	10) Poor investigation of project location
	11) Poor quality assurance and quality control by consultant
	12) Owners expectations and quality improvement by client
	13) Late payments
	14) Inexperienced consultant
2) Algebberi $d = l$	15) Multiple consultants
3) Alaghbari <i>et al</i> .	16) Subcontractors financial problems
(2007)	17) Conflicts with residents
	18) Unavailability of technical professionals in the contractor's
	organization
	19) Delay in providing utilities
() Chan 8	20) Elections and clients representative changes
4) Chan &	21) Clients organizational problems
Kumaraswamy (1997)	22) Errors in contractual documents
	23) Late revision of designs
	24) Delay in order issuance by clients25) Multiple contractors
5) Sambasivan &	26) Low level of labours efficiency/ Productivity
Soon (2007)	27) Problems with other organizations
- DDIIS	28) Inadequate skill of equipment-operator
PERFUS	29) Inadequate skill of equipment-operator 29) Inadequate understanding of clients need
	30) Poor material specifications
6) Ren et al. (2008)	31) Poor consultant coordination
0 Kell <i>et ut</i> . (2000)	32) Government pressure
	33) Design errors
	34) Conflicts with consultant and contractor
	35) Lack of scheduling and planning
	36) New regulations and codes
7) Kikwasi (2012)	37) Weather conditions
	38) Waiting time for site inspection and approval by consultant
	39) High range of labour costs
	40) Inadequate site mobilization by contractor
8) Faridi & El-Sayegh	41) Poor site and work investigation by consultant
(2006)	42) Poor prediction of equipment types
	43) Geological problems
	44) Lack of coordination
	45) Lack of capable clients representative
9) Hsieh et al. (2004)	46) Skill shortage on certain trades
``'	47) Site restrictions
	48) Delay in performing inspection and testing by consultant
10) W	49) Replacement of key personnel by clients
10) Wu et al. (2004)	50) Unsafe practices during construction

Lists of change causes

	51) Unavailability of managerial and supervisory personnel
	52) Non-familiarity of contractor with local regulations
	53) Inadequate bidding documents by clients
11) Aibing & Lishnog	54) Poor distribution of labour
11) Aibino & Jigbroo	55) Absence of consultant's site staff
(2002)	56) Poor programming of Material Procurement
	57) Poor inspection and supervision by contractor

APPENDIX B

	Lists of change effects
References	Effects of construction change
References	[47 effects factors]
	1) Decrease in productivity of workers
1) Rehman (2015)	2) Increase in overhead expenses
1) Remnan (2015)	3) Unnecessary procurement
	4) Degradation of health & safety
	5) Slower project progress
	6) Accumulations of interest rate on the capital to finance the project
2) Sambasivan & Soon (2007)	7) Waste on abandoned work
	8) Damage to reputation
	9) Decrease in quality of work
	10) Delay in completion schedule
	11) Increase the cost of the projects
3) Li <i>et al</i> . (2000)	12) Demolition costs
	13) Demolition and rework
	14) Quality degradation
	15) Dispute between owner and contractor
4) Haseeb <i>et al.</i> (2011)	16) Additional money for contractor.
	17) Increase in overheads
	18) Delay completion schedule
	19) Delay in payment
5) Motaleb & Kishk (2010)	20) Replacement/ Substitution of materials
5) Wotareb & Kishk (2010)	21) Additional specialist equipment
	22) Changes in materials specifications
	23) Wastage and under-utilization of man-power resources
	 24) Logistics delays 25) Additional health & safety equipment/measure 26) Addition of work 27) Deletion of work 28) Decar quedity of metasists
	25) Additional health & safety equipment/measure
6) Arain & Pheng (2005)	26) Addition of work
	27) Deletion of work
	28) Pool quality of materials
	29) Decrease in productivity
DIISLA	30) Litigation costs
7) Aibinu & Jagboro (2002)	31) Rejected material
T E.	32) Extension of time on the project
	33) Complaints of one or more of the parties to the contact
	34) Additional specialist personnel
8) Hanna (1999,	35) Overtime costs
2002,2004,2005)	36) Problems with new materials
	37) Rework of bad quality performance
	38) Slow response and poor inspection
	39) Cost overruns due to inflation and fluctuations
9) Ramabodu & Verster	40) Rework/redesign
(2010)	41) Additional equipment and materials
· · · · ·	42) Changes in material types and specifications during construction
	43) Abandonment of building project.
	44) Work duration extension productivity degradation
10) Bower (2000)	45) Additional payment to contractors
	46) Interrupted cash flow
	47) Increased retention/ contingency sum

Pilot Study Form

Structural Relationship Model of Causes and Effects of Construction Changes in UAE Construction Industry

This questionnaire is part of the PhD project. All information given will be kept with utmost confidentially and is for education purpose only.

The purpose of this pilot study is to verify the designed questionnaire by checking its clarity and the items relevancy by construction experts. It is a great pleasure to select you as an expert to this study based on your vast experiences in the UAE construction

industry. SECTION A: RESPONDENTS DEMOGRAPHY

Contact information (optional)

Name

This section requires your information. Please **Tick** ' $\sqrt{}$ in the appropriate box to answer the questions below.

Email

1.	Your Qualification:
r	□ Less than Bachelor Degree □Bachelor Degree □ Postgraduate
2.	Working Experience:
	□Less than 5 years□5 to 10 years□11 to 15 years□ More than 15 years
3.	Your position:
	□Technical Worker □ Engineer□ Executive management (or supervisor)
	□Senior Manager
4.	Select your organization:
	□Consultant □Contractor □Client
5.	Type of construction that you currently involved?
	□Buildings □Infrastructure □Office
	If others, please specify
6.	Which Sector you are working with?
	□Governmental □Private
7.	State the maximum contract amount that you have ever involved?
	□Above 100Million Dhs □ Below 11Million Dhs
	□50Million – 100M Million Dhs□11Million – 49Million Dhs

SECTION B: CAUSATIVE FACTORS TO CHANGES

This section provides a list of factors causing changes. You as an expert in the UAE construction industry are requested to evaluate each of the factors using 5-point Likert scale as table below.

Likert's scale	1	2	3	4	5
Level /Degree	Not Strong	Less Strong	Neutral	Strong	Very Strong

Please **TICK** ' ψ ' to the appropriate level of relevancy in each of the factors box using 5-points Likert's scale as above. You can also amend any of the listed factors by writing to the respective factor. Also, you can suggest new location of the factor if it is not suitable to the assigned group.

No	Causativa factors to Changes		Level of relevancy				
INO	Causative factors to Changes	1	2	3	4	5	
	Group: Client						
1	Clients financial problems						
2	Late payments						
3	Delay in order issuance by clients						
4	Owners' needs						
5	Economic inflation						
6	Elections and clients representative changes						
7	Inadequate understanding of clients need						
8	Conflicts with consultant and contractor						
9	Multiple contractors						
10	Clients organizational problems						
11	Unprofessional clients						
12 13	Clients authority change						
13	Inadequate site mobilization by contractor Inadequate bidding documents by clients						
14	Lack of coordination						
15	Replacement of key personnel by clients						N
17	Lack of capable clients representative		TI	H	A		
18	Skill shortage on certain trades	U					
19	Unsafe practices during construction						
19	Group: Consultant						
20	Poor material specifications						
21	Lack of scheduling and planning						
22	Poor site and work investigation by consultant						
23	Late revision of designs						
24	Poor site management team						
25	Inexperienced consultant						
26	Poor estimations of cost and quantity						
27	Multiple consultants						
28	Poor investigation of project location						
29	Poor consultant coordination						
30	New regulations and codes						
31	Poor prediction of equipment types						
32	Site restrictions						
33	Weather conditions						
34	Geological problems						
35	Poor distribution of labour						
36	Absence of consultant's site staff			<u> </u>			
37	Unavailability of managerial and supervisory personnel			<u> </u>			
38	Delay in performing inspection and testing by consultant						
39	Waiting time for site inspection and approval process of						
	quality control tests or results by consultant						
40	Poor quality assurance and quality control by consultant						
	Group: Contractor						

		1	1	r	
42	Subcontractors financial problems				
43	Errors in contractual documents				
44	Problems with other organizations				
45	Government pressure				
46	Design errors				
47	High range of labour costs				
48	Conflicts with residents				
49	Delay in providing utilities				
50	Owners expectations and quality improvement by client				
51	High range of overhead costs (e.g. office rents, contract				
51	costs, etc.)				
52	Unavailability of technical professionals in the contractor's				
52	organization				
53	Lack of contractor's administrative personnel				
54	Low level of labours efficiency/ Productivity				
55	Inadequate skill of equipment-operator				
56	Poor programming of material procurement				
57	Non-familiarity of contractor with local regulations				
58	Poor inspection and supervision by contractor				

SECTION C: EFFECTS OF CHANGES TO PROJECT PERFORMANCE

Please **TICK** ' ν ' to the appropriate level in each of the factors box using 5-points Likert's scale as above. You can also amend any of the listed effects by writing to the respective effect. Also, you can suggest new location of the effect if it is not suitable to the assigned group.

No	Effect of Changes			of rele	evancy	
110	C C	1	2	3	4	5
	Group: Time Overrun					
1	Delay in completion schedule					
2	Logistics delays			IA	Δ	\mathbf{N}
3	Slower project progress	11	11	N		
4	Decrease in productivity	U				
5	Delay completion schedule.					
-6	Dispute between owner and contractor					
7	Decrease in productivity of workers					
8	Additional specialist personnel					
9	Cost overruns due to inflation and fluctuations					
10	Addition of work					
11	Deletion of work					
12	Rework/redesign					
13	Work duration extension					
14	Productivity degradation					
	Group: Cost Overrun					
15	Increase in overhead expenses					
16	Increase the cost of the projects					
17	Additional money for contractor.					
18	Delay in payment					
19	Additional specialist equipment					
20	Additional health & safety equipment/measure					
21	Unnecessary procurement					
22	Accumulations of interest rate on the capital to finance the					
22	project					
23	Waste on abandoned work					
24	Demolition costs					
25	Increase in overheads					
26	Additional equipment and materials					
27	Additional payment to contractors					
28	Interrupted cash flow					

NAH

29	Increased retention/contingency sum			
30	Overtime costs			
31	Litigation costs			
	Group: Quality			
32	Rejected material			
33	Poor quality of materials			
34	Changes in materials specifications			
35	Problems with new materials			
36	Changes in material types and specifications during			
	construction			
37	Replacement/ Substitution of materials			
38	Quality degradation			
39	Damage to reputation			
40	Degradation of health & safety			
41	Demolition and re – work			
42	Decrease in quality of work			
43	Complaints of one or more of the parties to the contact			
44	Rework of bad quality performance			
45	Slow response and poor inspection			
46	Extension of time on the project			
47	Wastage and under-utilization of man-power resources			
48	Abandonment of building project.			

SECTION D: SUGGESTIONS FOR IMPROVEMENT

As an expert, please suggest any improvements to this questionnaire, either to add or subtract any items in the questionnaire, repetitive of the items, items not in the appropriate group or others as in the table below:

Structural Relationship Model of Causes and Effects of Construction Changes in UAE **Construction Industry**

Researcher information:

- 1 Name: Abdulla Eissa Saleh Al Ameri
- 2. Phone No:00971554473719
- 3. Faculty: Faculty of Technology Management and Business (FPTP)
- Email: alaamriab@hotmail.com 4.
- Programme: Doctor of philosophy in Technology Management 5.
- 6. Supervisor: Prof. Dr. Ismail Abdul Rahman

Dear Participants,

NAI The purpose of this survey is to identify significant factors causing cost overrun in UAE construction industry. As a construction practitioner having vast experiences in UAE construction industry, it is an honour to invite you to participate to this survey. Your personal details will not be required and the information provided in this survey is STRICTLY CONFIDENTIAL and will be used for the purpose of this research only. The aim of the questionnaire is to examine the Relationship of Cause and Effect of Changes to Construction Project Performance: UAE Construction Industry. Your answers to the questions below are much appreciate and will be dealing with all information provided strictly confidential.

This questionnaire consists of THREE (3) sections that are:

Section A: Respondents demography.

Section B: Factors causing changes.

Section C: Effects of changes to project performance.

Part A: Respondents Demography

Instruction: Please fill in the blanks or tick ' $\sqrt{}$ ' in the box to answer the questions.

1. Gender.	
Male	Female
2. What is your highest academic qualifica	
Less than Bachelor Degree Postgraduate	Bachelor Degree
3. Please tick the number of years Working	
Less than 5 years	5 to 10 years
11 to 15 years	More Than 15 Years
1. Please tick you're position in your cor	npany:
Technical Worker	Engineer
Executive management (or super-

APPENDIX G

Interview Guide (PLS Model Validation)

This is a structured interview with selected construction practitioners. The main purposes of this interview are;

 to validate the model of the relationship between project's change causes and effects on the construction's project performance

(Note: The information which you provide me will be treated in the strictest confidence)

Section A: About Participant

This section is to acquire the participants' information regarding their construction's experiences. Please fill or tick ' $\sqrt{}$ ' the box to answer the question.

1. Please state your role within your organization?

2. Please state your	working experience	in construction indu	stry.		
0-15years	16-20years	21-25years	26-30years	31 years	
3. Please state your	highest academic qu	alification.			
Diploma	Degree	Master	PhD		
4. Numbers of exec	cuted projects you ha	ve participated in the	e last 5 vears.		
5 projects	-10 projects	1-15 projects	16 projects		
Section B: Model	Validation				
This section is to va	alidate the developed	PLS-SEM model as	s presented to you in	the interview session.	
	-		-	and af all and a ffeate	

This section is to validate the developed PLS-SEM model as presented to you in the interview session. The model indicates the relationship between 3 groups of change causes with 3 groups of change effects on construction projects performance. Survey data for the model development was provided by construction leaders in Dubai Expo Mega projects

First outcomes of the model are as listed in the Table 1.0 which shows the ranking of 3 most important change causes of each causes group in instigating construction effects. Hence, you're being selected as an expert to validate these outcomes based on your agreeability of the ranking associated to UAE construction environment.

P

Cause's Group	Rank of most important Change Causes	agreea appropriat	tick your bility to the te box using $()$	Please suggest New Rank if you don't agree	
*		Agree	Not Agree	uon t agree	
	1. Elections and clients representative changes				
	2. Clients authority change				
Client (CLE)	3. Inadequate bidding documents by clients				
	4. Skill shortage on certain trades				
	 Poor site management team Poor estimations of cost and quantity 				
	3. Poor site and work investigation by consultant				
Consultant (CST)	4. Unavailability of managerial and supervisory personnel				
	5. Delay in performing inspection and testing by consultant			-	
	6. Poor prediction of equipment types				
	1. Poor inspection and supervision by contractor				
	2. Poor programming of Material Procurement				NA
	3. Design errors4. Inexperienced subcontractors		JKU T	UN AM	
Contractor (CON)	5. Non-familiarity of contractor with local	1 101			
PERP	regulations 6. Owners expectations and				
	quality improvement by client				
	7. Low level of labours efficiency/ Productivity				

Second outcomes of the model are as listed in the Table 2.0 which shows 3 most important effects in handling construction challenges. Similar to first outcomes, as an expert you are requested to validate the ranking of 3 most effects faced by leaders of UAE construction industry.

		Please	Please suggest			
Effect's Group	Rank of most important Change Effects		bility to the te box using ($$)	New Rank if you		
F	g	Agree Not Agree		don't agree		
	1. Elections and clients representative changes					
Time Overrun (TO)	 Clients authority change Inadequate bidding documents by clients Skill shortage on certain trades
